DATA NEVER SLEEPS 6.0

How much data is generated *every minute*?

There's no way around it: big data just keeps getting bigger. The numbers are staggering, but they're not slowing down. By 2020, it's estimated that for every person on earth, 1.7 MB of data will be created every second. In our 6th edition of Data Never Sleeps, we once again take a look at how much data is being created all around us every single minute of the day—and we have a feeling things are just getting started.

The world's internet population is growing significantly year-over-year. In 2017, internet usage reached 47% of the world's population and now represents 3.8 billion people.

2020

	<i>From</i>	<i>To</i>
1	Business to consumer	Person to person economy
2	Periodic fixed intervals	On-demand
3	You go to it	It comes to you
4	Generic	Highly personalized
5	Location centric	Location agnostic
6	Structured, segmented & siloed	Blended, blurred & multi-skilled
7	Fixed engagement and interactions	Multiple channels and interfaces

In 2013, HACT launched a ‘Big Data’ project...

HACT UK housing data standard

(powered by OSCRE)

Looking ahead: 6 Ways Technology is changing social housing development, resident experience and staff experience

Digital management of sites from design and build through to maintenance and management

Increase in digitisation of interaction with residents

Wants/needs will be predicted before residents realise them

Technology will take an active role in improving health

Enhanced management and use of data generated by citizens and connect devices

Multi-skilled staff expect to interact with data & technology to do their work in a blended and location agnostic way

*Technology is
powering the shift.*

*Data is the oil of the
technology engine.*

Innovating: Design & Construction

- Use **AR/VR** to:
 - Virtually design properties
 - Access real-time information on site
 - 3D property walkthroughs for customers
- Use **3D Printing** to:
 - Construct components or entire buildings
- Use **drones** to:
 - Collect photos, videos & measurement from site
 - Provide control & security

Martin Bros., Los Angeles (2018)
*Use of HoloLens to build bathroom
without construction plans*

WinSun, China (2015)
*3D-printed five-storey
building*

Project Milestone,
Eindhoven University of
Technology (2018)
*World's first 3D-printed
habitable homes*

Innovating: Estate Management

Use **cloud-based platform & machine learning** to:

- Access all property documentations in one place
- Manage assets & customer records more efficiently

Use data gathered from **connected appliances** to:

- Monitor & minimise energy consumption

Use **AI chatbots** and smart **IoT devices** to:

- Obtain quick information on repair/substitution needs & prompt actions
- Maximise efficiency & reduce costs
- Act proactively to increase customer satisfaction

Use **3D printing** to:

- Produce fast & personalised substitute parts

UK (2018)
Smart Meters

Renfrewshire Council, UK (2018)
*Predictive maintenance
using IoT - smart sensors*

Innovating: Resident Experience

- Use **IoT** to:
 - Create a smart home environment
 - Connect devices & appliances that can set, remember & anticipate tenants' preferences
 - Improve life quality for more vulnerable tenants
- Use **AI-based interfaces** to:
 - Respond to customer queries
 - Schedule appointments
 - Get info on rent payments
 - Report faults & needs
 - Avoid service failures
 - Analyse customers' comments & complaints
 - Predict difficulties in paying rent & prompt early interventions

Nest UK (2017)
Smart thermostats & smoke alarms

LG (2017)
Smart fridge

Capita (2017)
*Proof of concept using Amazon's
Alexa for tenants' enquiries*

Innovating: Social Care

Use **AI-based interfaces** to:

- Perform daily check-ups on tenants' health conditions
- Pick up on tenants' patterns to monitor sudden changes

Use **motion sensors & wearables** to:

- Monitor movements & vitals of patients in need of care

Use **smart locks & alarm systems** to:

- Improve monitoring & enhance security
- Collect real-time data and escalate situations to emergency services if needed

Loreburn Housing Association, Scotland (2018)
*Use of smart wristbands to monitor senior
tenants' health & prevent falls*

Have you used a food bank recently?

Yes No

Back Next

Key long run benefits of a data standard for the sector:

- The ability to bring together data on tenants or assets quickly and easily across multiple systems and use it to drive more effective business decisions
- Greater freedom to move between and integrate technology platforms- creating a more functional market in housing technology and data insight
- Enable more effective data sharing with other public services and participate in the growing policy interest in this space
- Generate better and more bespoke comparative performance and cost insights
- Open the door to faster introduction of connected home/IoT technologies.
- Reduce costs around service sharing, stock rationalisation and merger by providing greater transparency and comparability of operational data and reduced business integration overheads
